

The Greek ePrescription System and Patient Summary

**Athina Triantafyllidi,
Director IDIKA S.A**

Description of the Greek ePrescription System

- ❑ The Greek ePrescription System is a nationwide widespread web based application for the creation, transmission, dispensing and monitoring of medicine prescriptions and diagnostic referrals .
- ❑ The most important e-health initiative in Greece and the biggest e-government application with up to 850.000 transactions per day.
- ❑ Prescription based on active substance supported for the first time - patients can choose for the first time the drug they wish.
- ❑ The system has been developed by IDIKA SA – a public owned company specialized in IT products for Social Security and Health Service public organizations.
- ❑ Two phases –pilot phase Oct 2010-May 2012, full production June 2012 –today.

Rationale and Objectives

The Greek ePrescription Size

- ✓ **43.000** doctors
- ✓ **11.900** pharmacies
- ✓ **5.500.000** prescriptions/
month
- ✓ **2.000.00** diagnostic
referrals/ month
- ✓ **2.900.000** patients served
/month

Θεραπευτικά Πρωτόκολλα - ΕΟΦ

SPC φαρμάκων - ΕΟΦ

The National e-P system: Overall structure

Functional Architecture

Portal

- Secure – Authorized Access
- Communication and forums

Patient Data

- Demographic data
- Patient Summary
- Social Security Coverage

Good Practices

- Therapeutic Protocols
- Diagnostic Protocols

Patient transactions

- Medical Visits
- Prescriptions
- Referrals or clinical tests
- Access Rights

Business Intelligence

- Data Analysis
- Risk Management
- Fraud Detection.

Health Professionals' transactions

- Physicians
- Pharmacists
- Laboratories

Financials

- Clearance
- ePayments
- Access to financial data

Interoperability

- Medicine's National Database
- National Social security Registry
- Doctor's and pharmacist's software
- Hospital's ERP's
- EPSOS Standards

ePrescription Benefits (1/2)

- ☐ Ruled based prescription and referrals validation
- ☐ Compatability between diagnosis and drug prescribed
- ☐ Direct prescription execution and expenditure control
- ☐ Alignment with guidelines and prescription rules
- ☐ Patient Medication Summary
- ☐ Monitoring of prescribing behavior
- ☐ Electronic drug validation and control of the validity, legality of drug movement to the supply chain

ePrescription Benefits (2/2)

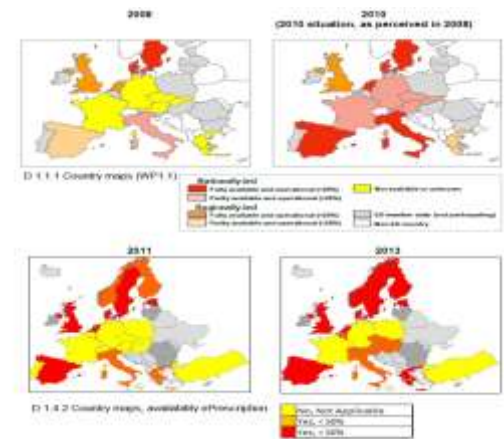

- ❑ Accurate statistical data ensuring complete transparency and important contribution to the decision making policy
- ❑ Reduction of medication costs
- ❑ Standard & Dynamic administrative reports generated for Ministries, SSFs, etc
 - Average Price Per Prescription - trends
 - Prescription expenditure
 - Issued/Executed Prescriptions per Day / Month
 - Number of Beneficiaries served by the E-Prescription System
 - Number of Doctors and Pharmacists who prescribe electronically per day
 - Dynamic reports on demand

Next Steps

- ▶ NSRF 2007-2013 Resources exploitation for system improvement
- ▶ The Operational Improvements include:
 - ✓ Gradual integration of approved therapeutic protocols
introduction of diagnostic protocols
 - ✓ Digital signs
 - ✓ BI system
 - ✓ Interoperability with doctors IT systems, Laboratories IT systems & Hospitals ERPS

In summary, the national e-prescription system of Greece

- Although only recently introduced (2010), already covers more than 98% of all prescriptions prescribed today
- Its introduction helped improve patient services
- It proved a very useful tool for containing unnecessary expenditure, related to (excessive) medication use.
- It is already a valuable source of planning, control and transparency data for the Greek healthcare system.
- It was build under pressure - Its completion (full functionality) is an on-going process ... and a major challenge ...

Quite recently the law 4328/2013 was voted by the Greek Parliament. It has to do with the National Primary Health Network, in which (Article 51, paragraph 4) the patient summary is institutionalized.

- Based on the European Guidelines
- Compatible with EPSOS NCP

Towards a national EU patient Summary

- ❑ An extension of e-Prescription services
 - ❑ Based on Patient Summary Guidelines
 - ❑ Created in two steps
 1. Medication Record and Health care encounter reports from Health Care Providers
 2. Mediated by a doctor
- ❑ Continues process of creation of reports to be incorporated into PS by family physician or other Health Care Providers
- ❑ Cross border consent and security policy

The process of developing the e patient summary

- ✓ Patient Summary search from doctor (Primary Health Care (PEDY), Healthcare Units (Hospitals) → display patient information after patient's permission
- ✓ Electronic prescription insertion and execution
- ✓ Patient Summary research where all patient information will be displayed after e prescription execution
- ✓ Design and development of electronic hospital discharge
- ✓ Patient Summary research with the inclusion of the hospital discharge data
- ✓ Recall of patient consent
- ✓ Patient Summary search – Message for rejection

According to EpSOS Approach:

Patient Summary is a standardized set of basic medical data that includes the most important clinical facts to ensure safe and secure healthcare.

The Patient Summary includes:

- ✓ General information about the patient
- ✓ Medical summary of most important clinical patient data
- ✓ List of current medication

PATIENT General DATA

Identification

National Health Care patient ID

Personal information

Full Name

Date of Birth

Gender

Contact information country of stay

Address

Telephone No

Email

Preferred HP/Legal organization to contact

Contact Person/ legal guardian (if available)

Insurance information

Insurance Number

Patient Summary Contents (3/4)

PATIENT CLINICAL DATA

Alerts

- Allergy

- Medical Alert Information (other alerts not included in allergies)

History of past illness

- Vaccinations

- List of resold, closed or inactive problems

- Surgical Procedures prior to the past six months

Medical Problems

- List of current problems / diagnoses

- Medical Devices and implants

- Major Surgical Procedures in the past six months

- Treatment Recommendations

- Autonomy / Invalidity

Medication Summary

- List of current medicines

- (All prescribed medicines whose period of time indicated for the treatment has not yet expired whether it has been dispensed or not)

Social History

- Social History Observations

Pregnancy history

- Expected date of delivery

Physical findings

- Vital Signs Observations

Diagnostic tests

- Blood group
